
PART 5: RUNUP2

for transect: CM-158-2

Station locations shifted by: -6.41 feet from their
original location to set the shoreline to
elevation 0 for RUNUP2 input

RUNUP2 INPUT CONVERSIONS

for transect: CM-158-2

Incident significant wave height: 0.90 feet

Peak wave period: 1.54 seconds

Mean wave height: 0.56 feet

Local Depth below SWEL: 18.93 feet

Mean wave height deshoaled using Hunt approximation for
celerity assuming constant wave energy flux.

for discussion of shoaling coefficient

Depth, $D = 18.93$

Period, $T = 1.31$

Waveheight, $H = 0.56$

Deep water wavelength, $L0$ (ft)

$L0 = g \cdot T^2 / 2\pi$

$L0 = 32.17 \cdot 1.31^2 / 6.28 = 8.81$

Deep water wave celerity, $C0$ (ft/s)

$C0 = L0 / T$

$C0 = 8.81 / 1.31 = 6.72$

Angular frequency, σ (rad/s)

$\sigma = 2\pi / T$

$\sigma = 6.28 / 1.31 = 4.79$

Hunts (1979) approximation for Celerity $C1H$ (ft/s) at Depth D (ft)

$y = \sigma \cdot \sigma \cdot D / g$

$y = 4.79 \cdot 4.79 \cdot 18.93 / 32.17 = 13.51$

$C1H = \sqrt{g \cdot D / (y + 1. / (1 + 0.6522 \cdot y + 0.4622 \cdot y^2 + 0.0864 \cdot y^4 + 0.0675 \cdot y^5))}$)

$C1H = 6.72$

Shoaling Coefficient KsH

$KsH = \sqrt{C0 / C1H}$

$KsH = \sqrt{6.72 / 6.72} = 1.00$

Deepwater Wave Height $H0_H$ (ft)

$H0_H = H / KsH$

$H0_H = 0.56 / 1.00 = 0.56$

Deepwater mean wave height: 0.56 feet
